Trusted Solutions LLC is an IT Software development company focusing on chat and collaboration products to integrate mission and organizational requirements into strategic environments. We provide chat solutions for Department of Defense (DoD) and NATO agencies allowing cross-community and cross-domain secure communication between multiple platforms. Coupled with DoD cleared personnel and a 24/7 support network we provide holistic and turn-key solutions for the warfighter’s chat mission.

Differentiators

Trusted Solutions’ flagship software, Trusted IRC Server, is in use today as the largest chat communication server in the world for the U.S. and coalition military networks. With hundreds of missions a day being coordinated on our software platforms, the warfighter depends not only on our software reliability but on our instant support and veteran knowledgebase to continue the mission effort. Our team members helped build the mission chat networks in use today and continually engage to adapt our software and support efforts to meet new customer challenges and needs. So, when this means an on-site install or support effort ‘Anytime and Anywhere’ that is exactly what we do, in any mission environment, anywhere in the world, without pause.

Core Competencies
